ROLL AGAIN

ROLL AGAIN

Instructions

Overview

Turn dice rolls into a Bitcoin BIP-39 seed phrase, completely offline. Each set of 5 rolls picks 1 word at random from the full list of 2048 words. The words come from the dice alone, not from a wallet's random-number generator — which has quietly and catastrophically failed in multiple devices.

Step 1: Print and arrange pages

Print this entire PDF, one page per sheet, not double-sided.
Lay out pages 1–6 on a table, as shown at right.

Look at page 1. Notice the page has 6 sections, each section has 6 blocks, and each block has 6 cells. They're all laid out the same way as the pages. Each cell then has 2 words, one on the left and one on the right.

Step 2: Prepare worksheet and dice

Review the worksheet (the last sheet of this PDF). Use it to write down the dice roll numbers and the final word. Pencil works best, since you erase everything if you end up on a ROLL AGAIN area.

You'll be rolling 1 die 5 times, or 5 dice at once in a container. If you have 5 dice, a plastic food container box (Tupperware or similar) with a see-through lid works well — tip the closed box to line the 5 dice up along one edge.

Step 3: Generate each word

Do this process for each individual word. Repeat until you have 11 words (12-word seed phrase) or 23 words (24-word seed phrase).

First, roll all 5 numbers for the word

Get 5 rolls (either with 1 die or 5 dice) and write the numbers on the worksheet, left to right. If the first number is a 6, ignore that set and start over, since page 6 has blanks (see the Notes section for details).

Then, find the word.

Roll 1: go to numbered page
Roll 2: go to numbered section on page
Roll 3: go to numbered block in section
Roll 4: go to numbered cell in block
Roll 5: LEFT word for 1, 2 or 3. RIGHT word for 4, 5 or 6.

Write the Roll 5 word in the last worksheet column.

If you land on a grey ROLL AGAIN area, erase everything for that word and roll a new set of 5 numbers.

Step 4: Calculate final word

The last word of a seed phrase is a checksum, and needs to be calculated from the words you already have.

The easiest way is a hardware wallet: enter your 11 or 23 words and the device calculates the final word. SeedSigner, Jade and Passport all have this feature.

No hardware wallet? Use an offline tool such as SeedPicker or BIP39 Recoverer, on a computer booted from a Linux live USB (Tails, Ubuntu, or similar) with WiFi and ethernet off.

Write it on the final word line at the bottom of the worksheet.

Step 5: Store seed phrase, destroy worksheet

Copy the complete seed phrase to permanent storage. Then completely destroy (burn) the worksheet.

Notes:

- Do a few practice seed phrases first.
- No phones, cameras or smart devices in the room.
- Do not mark any words on the word pages, unless you plan to completely destroy those pages as well as the worksheet.
- About one fifth of attempts dead-end on a ROLL AGAIN area, that's expected.
- Why are there blank ROLL AGAIN areas? Every single word needs to have the same chance of getting picked. The 5 rolls lead to 2592 different possible combinations (roll 5 only picks left or right), more than the 2048 words. So 544 places are blank.

Worksheet

12-word seed phrase: fill rows 1–11. 24-word seed phrase: fill rows 1–23.
